

Build With AgentCore Challenge

Overview:

Deploy a working agent on [Amazon Bedrock AgentCore](#), attach memory, verify logs, and show the full pipeline end to end. Publish your code on Github, showcase your work on LinkedIn with "#CodebasicsBuildWithAgentCore2026", tagging AWS & Codebasics & get a chance to win \$250 worth AWS Credits.

Requirements:

1. Build a Basic Agent: Any functional agent is acceptable, if you're not sure what to build, follow along with any of the tutorials below:

- a. [Agentic AI Project in LangGraph I Build Lovable Clone](#)
- b. [CrewAI Tutorial I Agentic AI Tutorial](#)
- c. [Agentic AI Tutorial for Beginners I Langgraph Tutorial](#)
- d. [AI Agents Tutorial For Beginners I Agno Tutorial](#)
- e. [Gen AI Project Using Llama3.2 1 LinkedIn Post Generator Tool](#)

You can also find examples on the official [Amazon Bedrock Agentcore Samples](#) repository.

2. Deploy your agent on Bedrock AgentCore Runtime, add memory to your agent using AgentCore Memory, test it out and observe it using CloudWatch. Feel free to explore other features of AgentCore in your demo.

codebasics.io

3. Publish your code on a public GitHub Repository, with all the code and an appropriate README.md file.
4. Publish a LinkedIn Post, with a short presentation of your demo of the project. Use #CodebasicsBuildWithAgentCore2026 and tag AWS & Codebasics on your post.

Submission Deadline:

February 10 , 2026

Submissions after this date are not considered.

Reward:

The first twenty verified participants receive 250 USD in AWS credits.
